

LinkNet: Successfully Migrate to SAP HYBRIS and S4/HANA on GCP

A solution provider and project management for GCP Setup and SAP S4/HANA Installation.

The challenge

New billing system implementation is a significant project task for Management Information Systems team to handle with. For that, LinkNet was looking for the new system platform that can simplify and reduce significant operational tasks since Day+1. The system platform must be flexible and agile, in order to follow the system requirements that rapidly changes according to project stages.

The solution

GCP "Sole-Tenant" is the perfect solution for LinkNet's business requirements, a fit platform technology for new billing system (SAP-HYBRIS & SAP-HANA). Flexibility platform & agile topology solution is the key, and also can give Management Information Systems team a span of control on top of it as their own internal asset.

The results

Move and adjust the spec of Virtual Machines, scale up the system, or re-arrange the Virtual Machines now become very simple tasks, less time consume (in minutes, not days), which release the Management Information Systems team from complex activities or time-consuming activities to do those like they went with On-premises system.

“During the project stages, we need to change the platform's configuration many times. Those were challenging tasks yet time consumed with On-premises, but with GCP it can be done less than 30 minutes instead days. We are glad, the implementation of new Core Application run on-schedule, and our Management Information Systems team now can be more productive and focus on the process”.

Lim Yung Hauw, Head of IT Division, Link Net

About Link Net

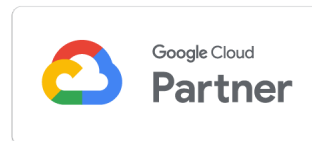

A leading provider of high-speed next generation broadband ("NGBB") and cable TV in Indonesia, serving the residential and enterprise markets across greater cities in Indonesia (with 2.65+ Million customers), a member of PT First Media Tbk or the First Media Group. Listed in the Indonesia Stock Exchange since June 2, 2014 under the ticker "LINK".

Industry: Media & Entertainment

Primary project location: Indonesia
